

## Subject card

Subject name and code	Signatures of non-classicality, PG_00158049											
Field of study	Quantum Information Technology											
Date of commencement of studies	October 2025		Academic year of realisation of subject		2025/2026							
Education level	Master's studies		Subject group		Obligatory subject group in the field of study							
Mode of study	full-time studies		Mode of delivery		at the university							
Year of study	1		Language of instruction		English							
Semester of study	2		ECTS credits		6.0							
Learning profile	academic		Assessment form		exam							
Conducting unit												
Name and surname of lecturer (lecturers)	Subject supervisor		dr Beata Zjawin									
	Teachers											
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM					
	Number of study hours	30.0	30.0	0.0	0.0	0.0	60					
E-learning hours included: 0.0												
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM					
	Number of study hours	60		0.0		30.0	90					
Subject objectives	Get acquainted with the concept of nonclassical phenomena as a fundamental property of Nature. Learn about the traditional phenomena of Entanglement and Bell nonclassicality, the recently reformulated notions of Steering and Kochen-Specker contextuality, and the newly identified phenomena of Spekkens contextuality and Network nonclassicality. Understand not only the foundational implications of these nonclassical phenomena, but also their role as resources for information processing.											
Learning outcomes	<table border="1"> <tr> <th>Course outcome</th> <th>Subject outcome</th> <th>Method of verification</th> </tr> <tr> <td>[QITL3_W04] knows advanced methods of theoretical and mathematical physics necessary in creating models of quantum mechanics</td> <td>Student has a clear understanding of models of classicality and how Nature does not respect them. Student knows and understands the basic concepts and terminology used in the quantum foundations approach to quantum information. Student knows the proofs of the main facts such as Asymptotic Equipartition Property, Shannon's theorem etc., as well as knows basic methods such as compression algorithms</td> <td>[SW4] test/exam - oral or written</td> </tr> </table>			Course outcome	Subject outcome	Method of verification	[QITL3_W04] knows advanced methods of theoretical and mathematical physics necessary in creating models of quantum mechanics	Student has a clear understanding of models of classicality and how Nature does not respect them. Student knows and understands the basic concepts and terminology used in the quantum foundations approach to quantum information. Student knows the proofs of the main facts such as Asymptotic Equipartition Property, Shannon's theorem etc., as well as knows basic methods such as compression algorithms	[SW4] test/exam - oral or written

[QITL3_W04] knows advanced methods of theoretical and mathematical physics necessary in creating models of quantum mechanics	Student has a clear understanding of models of classicality and how Nature does not respect them. Student knows and understands the basic concepts and terminology used in the quantum foundations approach to quantum information. Student knows the proofs of the main facts such as Asymptotic Equipartition Property, Shannon's theorem etc., as well as knows basic methods such as compression algorithms	[SW4] test/exam - oral or written										

Subject contents	Entanglement theory: bipartite and multipartite entanglement; separability criteria; entanglement distillation and monogamy; applications (e.g., teleportation). Bell nonclassicality: Bell's theorem; Fines theorem; Bell inequalities; Entanglement vs. Bell nonclassicality; bipartite and multipartite Bell scenarios; activation of Bell nonclassicality; the geometry of correlations (No-Signalling and Classical polytopes, the quantum set); applications. Contextuality: Kochen-Specker contextuality; state dependent vs. state independent contextuality; inequalities from hypergraphs; Spekkens contextuality; applications. Steering: bipartite and multipartite steering; steering inequalities; applications. Network nonclassicality: brief introduction to networks, examples, and applications				
Prerequisites and co-requisites	None.				
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade		
	tutorial part: test	51.0%	50.0%		
	lecture part: exam	51.0%	50.0%
